DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1- ^{10, 36-45, 71} rejected under 35 U.S.C. 103(a) as being unpatentable over Bellinger (US 6,436,005) in view of Middleton* (US 5,553,589). Bellinger discloses a fuel controlling device with a speed sensor (col. 1, lines 25-50). A fuel control system is operable depending upon the engine speed and an engine load value (col. 11, line 60 -Col. 12, line 10). The controller is controlling the fuel depending upon the various of the speed and the location of the gear (col. 1, lines 30-45). However, Bellinger does not show the use of a throttle command as a function of a fueling signal. Middleton shows that the use of a signal of the positioning throttle valve to control the fuel amount is old and well known in the art (col. 7, lines 40-65). Since the prior art references art from the field of endeavor, the purpose disclosed by Middleton would have been recognized in the pertinent art of Bellinger. Therefore, it would have been obvious at the time the invention was made to a person having ordinary skill in the art to provide the device of Bellinger with a throttle positioning signal as a function of a fueling signal as taught by

Middleton. Regarding the claimed particular consideration for the mass of the vehicle or the road condition, it would have been considered to be an obvious choice of mechanical design because one skilled in this art is familiar with basic fluid mechanic and normally has the laboratory test facilities. To optimize or select the suitable consideration for the mass of the vehicle or the road condition would be within the ability of ordinary skilled in this art.
